*Futuristic models
sprout wings where
you need them*

BASIC PLAN has four 16'-square wings and a central 16'-square core, giving 1,280 square feet of living area, plus basement. Kitchen, baths and turnace are grouped in core. Plastic wings are closed at ends but open at sides, so that non-load-bearing walls or windows of any type can be used.

"Conventional" plan is a T shape

RECTANGULAR HOUSE (left), arranged much like present ones, could be made by attaching doubled wings to each side of a doubled core. This gives 1,536 square feet of living area, plus large 16'-by-32' cellar above or below ground.

*"Mansion" may
look like this*

TWO OR MORE CORES, connected by "bridges," make any size house. Here, 2,560 square feet of area are supported on only 512 square feet of foundation.
